Telescope Mount TTS-160

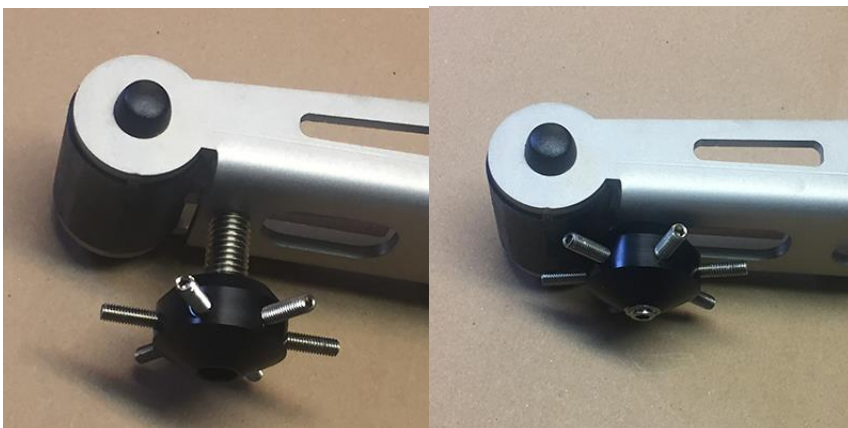

Installation of Adjustable Feet on TTS-160 Folding Pier. Article number TTS2780

1. Mount the 3 threaded stainless-steel bushings into the M8 hole at the end of each pier leg. Tighten hard with Allan key (4mm).

2. Screw the 3 adjustable feet onto the stain-less bushings.
To store the pier legs in the pier tube the feet must be screwed all the way in.

FROM THE PIER USER MANUAL

(find the complete manual at www.trackthestars.com/support)

Level the pier (not needed for Panther Mount Head)

When placing the pier on the ground the surface must be hard and fairly level. If the ground is soft place a wooden plate or stone beneath each pier foot. If the ground is not level use wood or stone to create stable and almost level stands.

Now level the pier precisely by adjusting the feet on the pier. The feet are adjusted by rotating them on the threaded bushing. Each foot can be adjusted 15mm.
